Digital Accessibility – Superfeet.com | September 2024

Accessibility Overview

Why do we care about digital accessibility?

15% of the population globally identifies as having a disability (1.3 billion people).

Total after-tax disposable income for working-age Americans with disabilities is about $490 billion annually.

The goal of Digital Accessibility is to design and build digital products so that, regardless of a person's disability, they can still interact with the product in a meaningful and equivalent way.

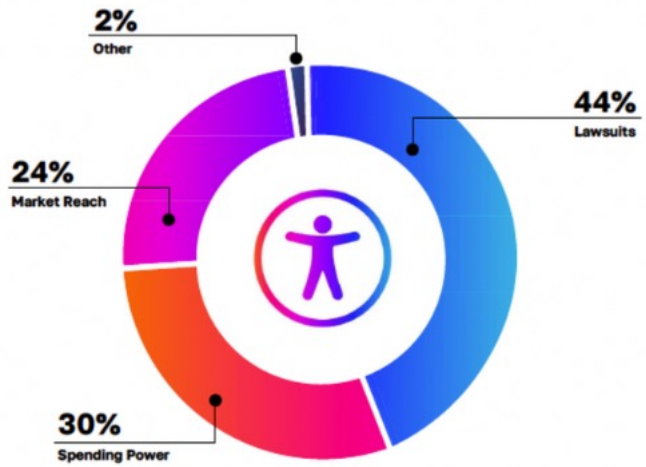
True inclusivity can only come when you include people with disabilities and accessibility best practices into the full product lifecycle—from planning, to designing, to coding, and more.

Superfeet.com Accessibility Goals

Our purpose is to make a positive difference in the lives we touch by shaping a strong foundation. We believe every person has the right to live with dignity and independence, in equality and comfort. We strive to deliver inclusive brand experiences by:

- Putting people first
- Honoring consumer privacy
- Anticipating consumer needs
- Providing equal access to our online environment

Which Factors Most Influence Executive Support for Digital Accessibility?



Accessibility Solutions

Outsourced

- Comprehensive accessibility auditing, testing, and remediation resources.
- Expert analysis of auditing and testing results and detailed remediation recommendations.
- Range of service offerings available – manual & automated testing, reporting, training programs, and some options for code & content remediation
  - Note that not all service providers offer code & content remediation services. Additional remediation resources may be required.
- Internal resources required for content remediation and development triage/prioritization.
- Example: LevelAccess (starts at ~$25k/yr)

Self Service ← **Recommendation for Superfeet**

- Automated accessibility testing tools – Google Lighthouse, webAIM WAVE, AXE -
- Manual testing with screen readers (JAWS, NVDA, VoiceOver) and keyboard navigation.
- Share errors found in the scan/tests with content & web development support resources for triage and remediation.
- Budget and resource requirements are variable based on internal capabilities, web development resources, and training needs.
  - $0/yr for Google Lighthouse, webAIM WAVE, and AXE
  - $0/yr NVDA (Windows) and VoiceOver (iOS/Mac), $1200 JAWS perpetual license (optional)

Accessibility as a Service

- Automated and/or manual accessibility audits & reports at regular frequencies.
- JavaScript-based overlay widget for UI and Design remediation.
  - Note that it is becoming common for certain litigants to troll sites with these kinds of overlay tools integrated.
    - Overlay widget is not required and can be hidden to limit exposure but it will still be present in the source code.
- Share errors found in the scan/tests with content & web development support resources for triage and remediation.
- Example: Accessibe
  - $490/yr for the “Standard” plan – overlay + compliance scans.
  - $1490/yr for the “Advanced” plan – overlay + automated monthly remediation report (w/ full documentation)
  - Request a quote for user testing by experts with disabilities - $500/hr
